Routing admission and declared evaluation scope

Python 3.11 actual offline CLI summaries, rendered in Chrome. Native qualification, journals, lifecycle and usage are FAKE. Not terminal images or real native/model evidence. Current-source native qualification remains blocked.

1. Compare routing and outcome dimensions separately

Read the routing/model contract before freezing a declared arm catalog. Run trial_admission.py report only with owned bound attempts and required source qualification. This demonstration uses synthetic qualification and native journals in a disposable copied-source fixture, not a qualified native run.

Current checkpoint 048ee7b88c6f existed before renewed smoke. Three actual offline CLI scenarios each contain four trials; thirteen runtime and three grader source hashes match. Each scenario records 640 synthetic tokens, not measured model usage.

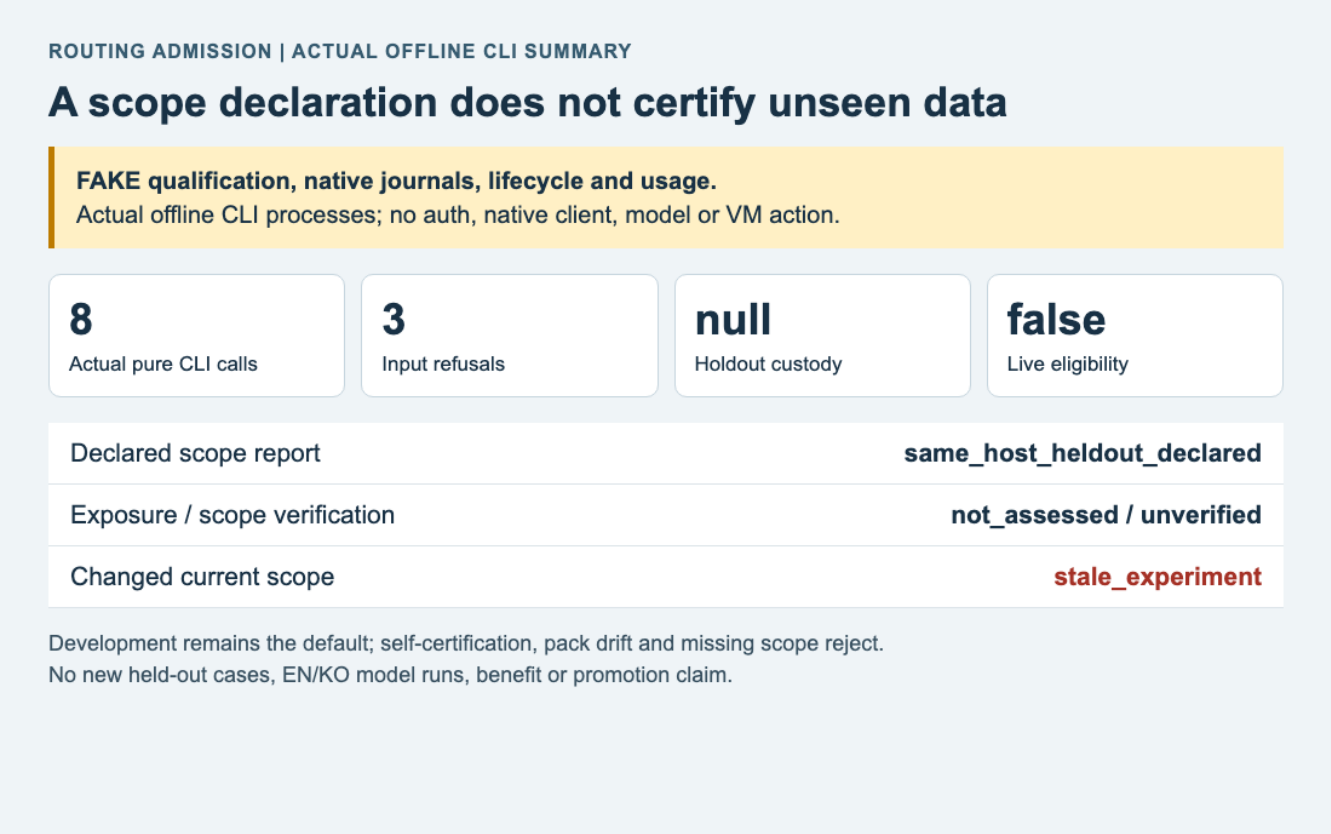

Expected result: Implicit first-page reads satisfy the expected-read criterion. Healthy none fails that criterion while all four artifact outcomes pass. Tampered qualification blocks all four trials. Client-model selection is not backend attestation; unobserved adherence and exposure stay inconclusive.

Routing admission and declared evaluation scope

Python 3.11 actual offline CLI summaries, rendered in Chrome. Native qualification, journals, lifecycle and usage are FAKE. Not terminal images or real native/model evidence. Current-source native qualification remains blocked.

2. Retain declaration limits and stale-scope failures

Use evaluation.py freeze/report with the optional evaluation_scope only to bind a declared same-host case/check pack. Inspect scope, custody and blockers independently of deterministic checks. Keep exposed development data distinct from actual held-out preparation.

Eight actual pure CLI calls used existing synthetic fixtures. Three invalid inputs rejected; changing current scope produced stale_experiment. No held-out cases or answers were generated and no auth, native client, model or VM was used.

Expected result: The declared report remains unverified with development_exposure not_assessed, holdout_custody null, live_eligible false and inconclusive promotion. The ordinary development route remains unchanged; current native qualification, EN/KO runs and held-out evaluation are separate pending work.
