Review development recommendations

Python 3.11+, frozen synthetic development evidence and an unchanged source identity. No credentials, model calls or installation.

1. Bind evidence before source review

Open improvement-review in the map. Pass experiment, report, completions, current_spec and source_diff_digest to promotion.py recommend on stdin. Keep the experiment and current spec unchanged.

Actual local catalog dialog, cropped through the usage instructions.

Expected result: The gate recomputes the report and binds its exact review references. It launches no model or command.

Review development recommendations

Python 3.11+, frozen synthetic development evidence and an unchanged source identity. No credentials, model calls or installation.

2. Read the limits before acting

Inspect recommendation and reasons before aggregate metrics. Missing evidence remains inconclusive; forged/stale evidence or critical failures reject. Ordinary source review is still required.

Development recommendation

Actual synthetic CLI result · 2026-10-18

```
{
  "recommendation": "inconclusive",
  "reasons": [
    "development_cases_only",
    "independent_holdout_custody_unavailable",
    "live_evidence_verifier_unavailable"
  ],
  "arithmetic_verdict": "eligible",
  "promotion_eligible": false,
  "merge_authorized": false,
  "install_authorized": false
}
```

Browser-rendered summary of actual CLI output.
No live qualification, merge or installation authority.

Browser-rendered summary of the actual synthetic CLI result, not a terminal capture.

Expected result: Even when synthetic arithmetic is eligible, the recommendation is inconclusive. Promotion, merge and installation remain unauthorized.
