# Review development recommendations

Python 3.11+, supplied synthetic development evidence and the current grader identity. The export producer remains an unmerged PR #35 dependency. No credentials, model calls or installation.

## 1. Bind evidence before source review

Open improvement-review in the map. Pass experiment, report, completions, current_spec and source_diff_digest to promotion.py recommend on stdin. Keep the experiment and current spec unchanged.

Actual local catalog dialog, cropped through the usage instructions.

Expected result: The gate recomputes the report and binds its exact review references. It launches no model or command.

# Review development recommendations

Python 3.11+, supplied synthetic development evidence and the current grader identity. The export producer remains an unmerged PR #35 dependency. No credentials, model calls or installation.

## 2. Read the limits before acting

Inspect recommendation, rule_result reasons and critical_violations_by_arm. Baseline-only critical defects do not reject a successful fix; candidate critical failures reject even with aggregate gain. Exit 0 alone is not eligibility; follow the source for both refusal shapes.

### Development recommendation

Actual synthetic CLI result · 2026-10-18

```
{
  "recommendation": "inconclusive",
  "reasons": [
    "development_cases_only",
    "independent_holdout_custody_unavailable",
    "live_evidence_verifier_unavailable"
  ],
  "arithmetic_verdict": "eligible",
  "critical_violations_by_arm": {
    "baseline": 4,
    "candidate": 0
  },
  "promotion_eligible": false,
  "merge_authorized": false,
  "install_authorized": false
}
```

Browser-rendered summary of actual CLI output.
No live qualification, merge or installation authority.

Browser-rendered summary of the actual synthetic CLI result, not a terminal capture.

Expected result: The fixture exposes four baseline critical violations and zero candidate violations. Arithmetic is eligible, but the recommendation remains inconclusive; promotion, merge and installation stay unauthorized.
